Phyto Feast™

Produced by the marine microalgae experts, Phyto-Feast™ is made by Reed Mariculture, the world leader in microalgal hatchery feeds. Our products are used in over 500 university and commercial hatcheries in over 70 countries around the world.

Why everyone loves Phyto-Feast

With six species in 5 classes, Phyto-Feast provides a diversity of Phyto-pigments, lipids, omega-3's, amino acids, carbohydrates and cell sizes. Proprietary harvesting and stabilizing processes keep cells intact and insures nutrients get to your animals.

You will see the difference!

- * Animals and tank diversity improve
- * Invertebrates come out to feed
- * New success with difficult-to-keep animals

Phyto-Feast is a blend of the most important marine microalgae, those chosen by universities and hatcheries for their superior nutritional value: Pavlova, Isochrysis, Thalassiosira, Tetraselmis and Nannochloropsis.

Phyto-Feast or Phyto-Feast Live?

Phyto-Feast Live has the same algae as Phyto-Feast but is handled with special care. Phyto-Feast Live is harvested and shipped fresh each week and has better short-term cell viability. Phyto-Feast has better long-term nutritional stability. Both are equally good for your aquarium.

Phyto-Feast is a preserved product available in 6 ounce, 16 ounce and 32 ounce bottles. Phyto-Feast contains whole and intact biological organisms in a media with benign food grade additives. No phosphates added. For longest shelf life, all Phyto-Feast should be refrigerated before and after opening.

Roti-Feast™

For superior color, vitality and growth-rates Roti-Feast is a highly nutritious plankton feed perfect for hardcorals, larval fish, and other reef carnivores that feed on small zooplankton. Rotifers are a critical feed used in marine fish and invertebrate hatcheries around the world.

Enriched and packed with nutrients

- * Roti-Feast™ contains five million fully intact marine rotifers *Brachionus plicatilis* with millions of eggs!
- * Grown and enriched with Instant Algae™ and Phyto-Feast™ for an optimum nutritional profile.
- * Contains a diverse nutritional profile including critical phyto-pigments, fatty acids and proteins.

- * Super Concentrate - 5 million rotifers in the 6 ounce bottle, and 14 million rotifers in the 16 ounce bottle (*Brachionus plicatilis*, 150-275 microns) and millions eggs (40-75 microns), gut-packed with Phyto-Feast.

- * Basic Nutrition - Proteins, Fatty Acids, and Amino Acids that will increase bio-metabolism without the addition of significant amounts of nitrates or phosphates Nutritionally critical elements (Carotenoids, Sterols, Omega-3's & Omega-6's, and Essential Amino Acids) Fully Intact - no "leaking" nutrients, fully bioavailable

- * Non Clumping - size appropriate for reef organisms
- * Rotifers are used extensively in professional hatcheries all over the world. They are preferred for digestibility, size, nutritional profile (when enriched) and almost universal acceptability by marine organisms.

Feeding / Dosage

2.5 teaspoons (.4 ounces) per 100 gallons. Feed daily and increase dosage as needed. Before feeding turn the bottle upside down and gently swirl the contents to bring them into suspension.

Add to high flow area of tank or premix in a cup of tank water. Target Feeding undiluted product is not advised" Roti-Feast is a preserved product available in 6 ounce, 16 ounce and 32 ounce bottles. Roti-Feast contains whole and intact biological organisms in a media with benign food grade additives. No phosphates added. For longest shelf life, all Roti-Feast should be refrigerated before and after opening.

Arcti-Pods™

Arcti-Pods are large, nutrition-packed planktonic copepods (3000 microns) harvested fresh from arctic waters. In the ocean copepods form the basis for much of the marine food chain.

Fish go crazy for them!

No other product excites your fish like Arcti-Pods! Even the most finicky fish go crazy for them. Great for invertebrates too! LPS corals, anenomes, zoanths, brittle stars and more. It seems everything loves Arcti-Pods. Superior Nutrition!

Arcti-Pods are rich in carotenoids which bring out the color of your animals. Arcti-Pods are also naturally rich in protein, omega-3 and -6 fatty acids, and waxy esters for growth.

Directions:

1 - 2 teaspoons per 100 gallon tank per day. Add to high flow area of tank or premix in a cup of tank water. Target Feeding undiluted product is not advised. Arcti-Pods is a preserved product available in 6 ounce, 16 ounce and 32 ounce bottles. Arcti-Pods contains whole and intact biological organisms in a media with benign food grade additives. No phosphates added. For longest shelf life, all Arcti-Pods should be refrigerated before and after opening.

Tigger-Pods™

Tigger-Pods are attractive large red copepods, Tigriopus californicus. They swim upwards with a stimulating, jerky swimming motion which is attractive to both fish and people. Finicky fish love them!

Tigger-Pods are perfect for culturing and restocking reeftanks & refugiums, as well as an excellent feed for fish, including mandarins and pipefish. They breed rapidly producing hundreds of eggs per female. Tigger-Pods is a live product available in 6 ounce bottles.

Macro-Feast™

Macro-Feast - *Gracilaria pacifica* is simply the best live feed for all of your herbivorous fishes. Hard to feed Tangs, Moorish Idols and Angels, simply love this algae, and its presence will help the feeding response of most other finicky fish as well.

Add Macro-Feast directly to your main tank (as decoration and food) or float it in your refugium as a biological filter to remove ammonia, nitrates and phosphates.

Macroalgae are healthy and most flavorful additions to the diet of many reef aquarium species. For many species of fish it is vital to proper nutrition. Many popular saltwater aquarium fish are herbivores, feeding primarily on algae growing on the coral reefs. In fact, a healthy diet rich in amino and fatty acids provided by algae will increase the longevity of reef fishes kept in aquariums. Further, a diet made up of algae promotes better color, health, and vitality of most Tangs, many Angelfish, and some Wrasses. For years people have been feeding their fish "substitute algae" such as raw lettuce and spinach. These greens are acidic in nature and freshwater in composition. Marine algae have the necessary salts and minerals that fish require.

Add Macro-Feast directly to your main tank (as decoration and food) or float it in your refugium as a biological filter to remove ammonia, nitrates and phosphates.

Currently Available: Macro-Feast *Gracilaria*.

1. 1/2 Pint container containing a dense cluster with thin branches
2. All parts are edible - no stems or waste left over
3. Each container will feed a 100 gallon tank for roughly 1 week
4. Shelf life is 3-4 weeks a cool, dimly lit area or warm refrigerator (warmer than 5 C)

Fuzzy-Phytes™

Reef Nutrition is proud to announce the release of a new herbivore treat - Fuzzy Phytes!

Fresh Veggies for fish

Live macro Algae (red) • Acrochaetium

Fuzzy-Phytes are live red macro algae with very fine filamentous branches. Their Nutritional value is similar to other red algae.

Fuzzy-Phytes are free floating and driftaround in your aquarium, attracting the attention of your fish.

Fish love to chase them! Fuzzy-Phytes are very delicate, making \Them a very easy to consume and digest.

Fuzzy-Phytes is a live product available in 6 ounce bottles. No phosphates added. For longest shelf life, all Fuzzy-Phytes should be refrigerated before and after opening.

Oyster-Feast™

Reef Nutrition is proud to introduce our newest product, Oyster-Feast™, a mix of both oyster eggs and ovarian tissue (1-200 microns).

- * Naturally size-appropriate for feeding SPS and LPS corals
- * Highly suitable for a broad range of corals and other invertebrates
- * Fast coral feeding response
- * High in protein and Omega-3 fatty acids
- * Stays in suspension

Ovarian tissue has all the benefits and nutritional value of the eggs but in a smaller particle size, down to 1 micron.

Oyster-Feast™ is available in 6 and 16 ounce bottles. No phosphates added. For longest shelf-life, Oyster-Feast™ should be refridgerated before and after opening.
